

GPT4YOU

Your AI. Your rules.

 **Low-Cost, On-Demand Access to the full potential of LLMs**

 **100% GDPR-compliant**  **Integration of internal knowledge**

Thanks to their ease of use and versatility, modern AI solutions such as ChatGPT have quickly become an indispensable multifunctional tool for our digital activities. However, the input required for a customised response (prompt engineering) requires a lot of context and self-disclosure. In order to avoid revealing too many internal company details, its potential often remains underutilised in today's enterprises.

In addition, the costs for individual accounts can easily rise to disproportionate levels for companies with many employees, which also applies to the corresponding billing effort.

Imagine a one-time investment in an AI application that not only handles your data in full compliance with GDPR, but also only charges running costs according to usage, thus keeping them manageable. You can still utilise the full potential of the best large language models (LLM) for your company. In addition, the tool enables you to access all of your company's documented knowledge from a single platform in a targeted manner by providing you with specific and customised answers to your questions.

Our solution: GPT4YOU

With the help of our GPT4YOU platform, we connect your company to OpenAI (Azure) servers hosted in the EU in compliance with the GDPR. This ensures that the context processed in the chat is not used for training purposes. However, this does not mean that your employees have to do without the history of their individual conversations - it is stored locally in the browser cache and thus remains accessible to each individual.

Setting up a vector database enriched with company documentation also makes the company's internal knowledge accessible via one and the same platform at your request. This allows your employees to use AI without security concerns to create significant added value for your company - from the automation and optimisation of existing processes or the development of new ones, through all aspects of customer contact and marketing, to internal or external knowledge management.

Do you need even more privacy? Then we can also offer you a pre-trained open source model that is hosted in the company network according to your needs. This ensures that your data remains exclusively your data.

How it works?

All advantages of an AI solution

It is well known that AI is a real game changer for the economy. GPT4YOU gives you access to this world.

Using the latest LLMs from OpenAI and other providers, we offer you a specialist as support for almost all business areas. Whether customised with your contextual information or as a basic version, it offers fast, qualified information. This can be used to generate content for various requirements in day-to-day business, whether in marketing, customer relations, analysing specific issues and much more.

GPT4YOU therefore offers you the opportunity to maximise the benefits for your business from the growing market for AI solutions.

Protection of your data

Our GPT4YOU application is GDPR-compliant and can therefore be used without any legal concerns. Data is only stored on European servers that are provided via Microsoft Azure. The context that you yourself provide for the model is not used for training the LLM used. By default, GPT4YOU employs OpenAI models. Alternatively, it is also possible to set up your own open source LLM so that all data remains entirely within your organisation.

Clear cost structure

With GPT4YOU, you always have an overview of your costs and don't have to pay for each user account individually. Usage-based billing across all users significantly reduces costs compared to individual user licences.

However, GPT4YOU also enables precise control by means of token counters or, if desired, the specification of fixed token numbers. Shared use on a token basis reduces your overall costs and billing remains in your hands.

Fully customisable

Whether branded with your name or your company's logo, GPT4YOU can be fully customised. You can fully integrate our solution into your existing systems so that users have a standardised user interface.

GPT4YOU can be used as an expert in any subject area. This is because it is possible to connect to a vector database. Complex sets of rules, such as the IPMA standard of the GPM on project management, can be stored completely as a context in order to include them in questions.

Integrate your data

On request, we can store your company's collective knowledge in a vector database and make it usable for the LLM - without loosening our focus on data security.

It is also possible to set up your very own open source LLM. This means that your data remains entirely within the company and there are no ongoing usage costs.

Consultancy services

At FIDA, we use our passion, experience and expertise to advise you on all aspects of our GPT4YOU product. We are happy to support you with customised configuration and implementation and also offer you a comprehensive range of training courses through the FIDAcademy

Vorteile

- GDPR compliance
- Your Data stays private
- Flexible hosting options locally or in the cloud
- Fully customisable
- Experience and expertise of FIDA employees in the background
- Clear cost structure on a single invoice

The most important functions

User roles & authorisations

With GPT4YOU, you can not only create individual users, but also structure them into groups and assign them suitable roles. While administrators have unrestricted access, users with specific rights can complete their tasks in a targeted and efficient manner.

Advanced internet search

GPT4YOU offers a powerful internet search function that provides access to up-to-date and comprehensive information in real time. This integration dynamically expands the knowledge base by always using the latest data and sources for precise analyses and well-founded answers.

Image generation & file upload

With GPT4YOU you can not only integrate language models, but also image generators. This allows you to create new images by simply entering text. The upload function also allows you to integrate your own documents and images, ensuring smooth integration into AI-supported data processing.

Global availability

GPT4YOU is multilingual and can be used on all end devices, whether smartphone, tablet or desktop. Regardless of the language setting, the platform offers intuitive and accessible use so that you can work efficiently anytime and anywhere.

Fields of application

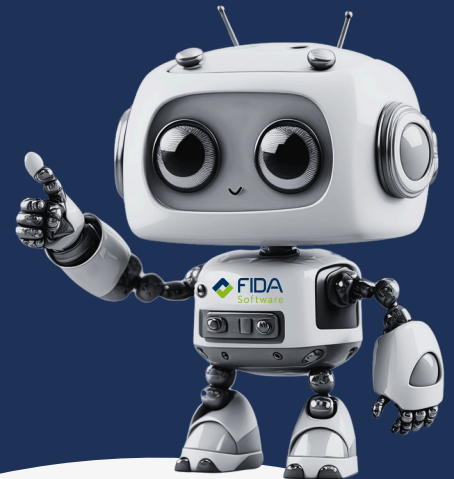

Content generation

- Development of processes
- Code generation
- documentation
- Creation of work instructions

Communication

- Internal communication with employees
- External communication with customers
- recruiting
- reporting

Knowledge management

- Integration into existing systems is possible
- AI solution as a 'search engine' is extremely accurate
- Applications in the R&D environment
- Company knowledge can be integrated

Reportings

- Optimisation of existing processes
- Analysis and visualisation of company data
- business intelligence
- Fraud detection, risk management

INDUSTRY-INDEPENDENT

Summary

GPT4YOU is a modern AI solution that offers a seamless and secure gateway into the world of artificial intelligence.

An intuitive user interface allows your employees to quickly integrate GPT4YOU into the processes of their respective business area.

Thanks to GDPR compliance and extensive protection of your company data, your employees can also expand GPT4YOU with sufficient context to generate the greatest possible added value in their specific area.

Last but not least - we not only install GPT4YOU on your servers and set it up, we also support your team with advice, configuration and training.
